

RM-50

Reverse Lift Axle & Activation of Back Up Alarm

Reverse-A-Matic™

The *Reverse-A-Matic™* RM-50 system combines functional value with trailer safety operations. The *Reverse-A-Matic™* trailer direction sensing system is a stand alone device that is independent from the cab. The *Reverse-A-Matic™* system automatically locks and/or lifts a self-steer or lift axle. The Lift Axle functions meet SPIF regulations for 3 & 4 axle trailers by removing control from the cab. The *Reverse-A-Matic™* RM-50 system has a second output, which will turn on backup lights and/or beeper while reversing to add safety and convenience. By activating the back up lights on the trailer you can illuminate the path behind the trailer and warn others of your presence.

The Reverse-A-Matic™ RM-50 offers the following functions

- Turns on the trailer backup lights
- Activates backup alarm system
- Inserts a steer axles locking pin to secure it for straight operation
- Lifts the trailer lift axle for manoeuvring

Optional auxiliary functions

- A dome light inside the trailer
- Chassis lights for night safety
- Any 12-Volt operation desired during or after backing up a trailer.
