

## ***REVERSE-A-MATIC™ RM-70*** ***With Speed Sensitive Steer Axle Locking Control***

**The *Reverse-A-Matic™* system is a major break through combining functional value with trailer safety operations.**

The *Reverse-A-Matic™* products are revolutionary stand-alone wheel directional sensing systems for the trailer that are independent from the cab. The *Reverse-A-Matic™* RM-70 system automatically locks a self-steer and controls a lift axle. The RM-70 adds an all new feature to our *Reverse-A-Matic™* systems. It will automatically insert the locking pin on a rear steer axle when going faster than 60 km/h. Automatic locking of a rear steer axle, while at highway speeds, will allow the axle to track evenly. This reduces component wear and tire scrub to lowering maintenance costs and increasing tire life. The steering action is released at lower speeds where the trailer needs its maneuverability. The *Reverse-A-Matic™* system will turn on backup lights and/or beeper while reversing to add safety and convenience.

### **The *Reverse-A-Matic™* RM-70 offers:**

- Turns on the trailer backup lights.
- Activates backup alarm system.
- Inserts a steer axle's locking pin for straight operation in Reverse.
- Lifts the trailer lift axle for maneuvering.
- Best for Rear Steering
- Prevents premature tire wear
- Prevents premature steer axle wear

### **Can activate auxiliary functions like:**

- ✓ A dome light inside the trailer.
- ✓ Chassis lights for night safety.
- ✓ Any 12 volt operation desired during or after backing up a trailer.
- ✓ Radar / Sonar

**Meets Manufacture's Specifications  
for Rear Steer Application**

The **Steer Axle** and the **Lift Axle** functions automatically removes control from the cab.

The **Reverse Lights** can illuminate the path behind the trailer and warn others of your presence.

All Wheel Monitor Products are designed to meet **SAE J-1455** Specifications for heavy duty vehicles.

# **INFRASTRUCTURE FRIENDLY COMPLIANT 2004/2005**

**MTO's Infrastruce friendly vehicles deregulation of lift axles in favour of steer axles  
for heavy trucking regulations in the weights and measures act.**

Ensures the trailer owner of proper steer axle operation regardless of operator's experience.
